Mentor Meeting with Tina Pham 03/08/21

SMAD group gave a layout on how they wanted it to look. SMAD designed the website with no functionality and they presented their user research

Implement code from there into C#

Convert SMAD's html format to .NET (like user login, etc.)

Most time consuming about the entire project was coding
- Start coding ASAP and have some functionality to present

What client and professor wants might be different. Ask client what they want functionality wise

AWS set up was done by the second sprint. If you need help with coding, professor or mentor could go on to website and check it

Don't name GitHub site "Green Valley Auction" because other members might do that too and other groups may easily find and look at your code

Have at least one member from both sides (CIS and SMAD) join in on each others meetings to stay in the loop on both sides

03/09/2021 - Team Meeting

- Tasks/Deliverables identified and placed on Gantt Chart
- Questions
- How to integrate with SMAD
- Priorities for Sprint 1

Main Summary: Reading through capstone pdf and identifying what we need to do

03/10/21- Client Meeting

The other services are appraisals and trash pick up? Small piece of services- shouldn't come first.

Create a tool for client, not for customer to contact or request services. That's for them to call/email.etc

Interaction comes through client giving them a portal. Not something they'd get to by themselves.

Client fills in form that collects all that customer information in a concise clear way so all customer info is in one place. They want to be able to edit this too. This is additional to services for customer.

Photos for real estate site: need a link for that website. People will send photos from their house fro them to give an estimate

Have cost information only displayed.

03/15/21 - Pre-Screening Demo Meeting

Polish Use Case in a final form. Make it a standard use case (digital)

Find out who has the fastest machine to run for presentation with client

Take pop ups out all across the site. (if we have time) Display messages on the actual site

Refine presentation and focus on prototype. Focus on design work
